

Summary: Connecting the I-Phone or I-Pod Touch to Drake Wireless

Details: Verify the phone is updated to firmware 2.0 or later.

- If the phone is not updated to 2.0 or later please verify that iTunes is updated to at least version 7.7 and plug in the phone.
- When the phone becomes viewable in iTunes select it and press check for updates.
- I-pod Touch may require purchasing firmware updates which can be purchased from the iTunes store.

Once the phone is updated to version 2.0 or later touch the settings button on the phone itself.

Push the Wi-Fi option on the list of settings and verify the Wi-Fi is turned on and when on Drake Campus select DUStudent. This should cause a popup prompting for your username and password. Username is your Drake ID number and your password is your BlueVIEW password then press the join button. After a few seconds the E symbol next to the AT&T in the top left hand corner should be replaced with several bars in a cone shape this shows you are connected to Wi-Fi.

Open Safari and go to any website and you should be prompted to register with the network much like with any computer. On this screen your username is your email login name and password. After successfully registering with the network please restart the phone and it should automatically reconnect to DUStudent any time it is within the network and Wi-Fi is turned on.
